ABOUT GO GREEN PLUS

Go Green Plus is a clean tech enterprise based in Tripura, established in 2025 with a vision to modernize urban sanitation and waste management through innovation, technology, and sustainability. The organization was founded on the recognition that conventional waste handling practices are no longer adequate to address the challenges of rapidly expanding urban ecosystems. By integrating electric mobility, digital monitoring platforms, and waste to energy solutions, Go Green Plus delivers a comprehensive and future ready sanitation model designed for efficiency, transparency, and environmental responsibility. The company is officially recognized as a startup under the Government of Tripura's Start-Up Policy and operates in the waste management sector with a strong focus on scalable, policy aligned, and implementation ready solutions. More than a service provider, Go Green Plus represents a progressive shift towards cleaner cities, smarter systems, and sustainable development, contributing to the larger vision of building resilient and environmentally responsible urban infrastructure.

VISION

Our vision is to establish Tripura as the clean tech hub of Northeast India by developing scalable and replicable models of waste management that can be implemented across the country. We envision a system where waste is no longer treated as a burden but as a valuable resource, where technology empowers governance, citizens actively participate in maintaining cleanliness, and renewable energy making it an integral part of urban infrastructure.

THE KEY CHALLENGE

High Volume of Untreated Waste

Large quantities of municipal waste remain unprocessed, resulting in landfill overflow, methane emissions, and environmental degradation.

Traffic Meets TrashWaste

Outdated Collection Methods

Continued reliance on manual and conventional systems that are inefficient, unsafe, and inadequate for modern urban requirements.

Dependence on Non-Renewable Fuels

Use of petrol and diesel vehicles increases carbon emissions and operational costs, making the system environmentally and economically unsustainable.

Lack of Real Time Monitoring

Absence of digital tracking systems leads to poor accountability, operational inefficiencies, and lack of transparency.

lack of public private partnerships

THE NEED FOR TRANSFORMATION

With rapid urbanization, traditional waste management systems are no longer viable. Cities require technology driven, scalable, and transparent solutions.

Aligned with SWM Rules 2026, the future demands:

- Source level segregation.
- GPS enabled monitoring.
- Data driven decision making.
- Active citizen participation.

This transition is not optional,it is essential for building resilient and sustainable cities.

OUR SOLUTION

Go Green Plus delivers an integrated, technology driven waste management system combining smart collection, digital monitoring, and sustainable processing. It enables efficient door to door collection with source level segregation and zero emission operations. A centralized digital platform provides real time GPS tracking, task monitoring, and productivity performance analytics, ensuring transparency. The system also integrates QR based citizen feedback and supports waste to energy through biogas, fertilizer and BioCNG production, reducing landfill dependency and promoting sustainable resource recovery.

PRODUCT OVERVIEW

Go Green Plus offers a range of advanced, electric, and technology-enabled equipment designed to modernize urban waste collection and sanitation systems. Each product is engineered for efficiency, durability, and compliance with sustainable urban practices.

"VAYU"

Next-Gen Cleanliness for Smart Cities: Go Green Plus Litter Picker Machine

Battery-Powered | Smart | Sustainable

At Go Green Plus, we are redefining urban sanitation with technology-driven solutions built for the future. The Litter Picker Machine (Battery Operated) is engineered to meet the evolving standards of Solid Waste Management (SWM) 2026, enabling faster, cleaner, and more accountable waste collection across cities and institutions.

Designed for high-efficiency operations, this machine minimizes manual intervention while maximizing output making it a perfect fit for modern municipalities, smart city projects, and ESG-driven organizations. With zero-emission electric performance and ergonomic handling, it ensures both environmental sustainability and workforce safety.

Parameter	Performance	Units
Maximum Machine length	Up to 2500	mm
Maximum Machine	Width Up to 1000	mm
Maximum Machine	Height Up to 1700	mm
Gross Machine	Weight Up to 600	kg
Airflow of operational system	Min.800	m^3.Hr
Collection bag / Container capacity with compaction	240	Liters
Noise Level during operation	55-65	db
Battery details	48 V, 100-145 AH (LiFePO4)	
Daily Battery life during overall suction and traction application	6-8 hr	hrs
Turbine Motor	High rpm @3000	1.5 kw, 48 V
Traction Motor	High rpm @3000	1.2 kw, 48 V
Water tank capacity	2- 3 Lit	Liters
Charge system	Off-board charging system	
Front LED	Yes	
Horn	Yes	
Beacon working light	Yes	
Body type	Metal / Polyester	
Chasis material	Galvanised	
Speed	8	Km/h
Brake system	Electromagnetic	
Suction fan	Aluminium radial type	
GPS Tracking system		

Why Choose Go Green Plus Litter Picker Machine?

Engineered for Performance. Built for SWM 2026.

High Performance Electric Power

Powered by a high capacity battery system, the Go Green Plus Litter Picker delivers long duration, uninterrupted operations on a single charge, ideal for both decentralized ward level cleaning and large scale municipal deployments.

Ergonomic & Operator Centric Design

Designed with a human first approach, the machine features intuitive controls, balanced handling, and fatigue reducing ergonomics ensuring higher productivity with minimal physical strain on sanitation workers.

Zero Emission & Future Ready

Fully electric and eco compliant, the machine enables carbon neutral operations, aligning with sustainability mandates and supporting cleaner urban air quality standards under modern SWM frameworks.

Multi Environment Versatility

Optimized for diverse use cases from urban streets and smart city zones to parks, transit hubs, and event spaces ensuring efficient collection of mixed dry waste like plastic, paper, and packaging materials.

Cost Efficient Operations (Low OPEX Model)

Reduces dependency on old Traditional method while increasing coverage efficiency, delivering lower cost per km cleaning and improved ROI for municipalities, contractors, and facility managers.

Low Maintenance, High Reliability

Built with industrial grade components, the system ensures minimal downtime, easy servicing, and long lifecycle performance, making it ideal for continuous daily operations.

Key Features

Go Green Plus Litter Picker Machine

- Extended Battery Runtime – High-capacity battery ensures long operational hours for uninterrupted cleaning cycles
- High-Efficiency Collection System – Effectively handles diverse dry waste streams including plastic, paper, and packaging materials
- Zero-Emission Operation – 100% electric performance supporting sustainable and compliant urban sanitation
- Lightweight & Agile Design – Easy maneuverability for narrow lanes, dense areas, and high-footfall zones
- Ultra-Low Noise Output – Ideal for hospitals, residential zones, and other noise-sensitive environments
- Rugged & Durable Construction – Engineered for Indian conditions with high reliability in daily operations
- High Coverage Efficiency – Optimized waste collection capacity to clean larger areas in less time
- GPS tracking – Machine can be tracked by GO Green Plus app.

“A smart investment towards mechanized, compliant, and ESG aligned waste management infrastructure built for the cities of tomorrow.”

Redefining Urban Cleanliness with Smart Electric Waste Collection

At Go Green Plus, we are redefining urban waste collection with technology driven solutions. The Smart EV Door to Door Waste Collection Vehicle is designed to meet evolving SWM 2026 standards, enabling efficient, organized, and accountable waste collection at source.
Built for high efficiency operations, it supports segregated collection (wet, dry, sanitary & recyclables) while reducing manual effort and improving service reliability. Ideal for municipalities, smart cities, and ESG driven organizations. With zero emission electric performance, low noise, and ergonomic design, it ensures cleaner operations, better workforce efficiency, and a smarter approach to urban sanitation.

Why Choose Go Green Plus Smart EV Door-to-Door collector?

Engineered for Performance. Built for SWM 2026.

Smart & Future Ready Technology

Built with integrated GPS and app based monitoring for real time tracking, route optimization, and data driven operations.

100% Electric & Eco Friendly

Zero emission performance with low noise operation, supporting sustainable and compliant urban sanitation.

Source Level Waste Segregation

Dedicated compartments for wet, dry, and recyclable waste to improve collection efficiency and SWM compliance.

Robust & Durable Build

Stainless steel chassis ensures long life, corrosion resistance, and reliability in tough working conditions.

Customizable for Every Project

Flexible design with branding, system integration, and feature customization based on client requirements.

Empowering Frontline Warriors

Designed to support the people who keep our cities clean, with ergonomic controls and easy handling that ensure safety, comfort, and dignity in everyday operations.

Key Features

Go Green Plus Smart Door-to-Door Collector

- 100% Electric Operation – Zero emission, eco-friendly mobility.
- Smart Waste Segregation – Wet, Dry, sanitary & Recyclables waste at source.
- GPS Tracking System – Real-time monitoring & route optimization.
- App-Based Monitoring – Data-driven collection management.
- Long Battery Life – Up to 8-10 hours continuous operation.
- Low Noise Performance – Ideal for residential and sensitive areas.
- Audio Awareness System – Supports public awareness campaigns.
- Ergonomic & Worker-Friendly – Safe, comfortable, and easy to operate.

“Driving the future of urban cleanliness with smart, electric innovation.”

OWC Machine

(Organic Waste Composting Machine)

At Go Green Plus, we engineer advanced Organic Waste Composting (OWC) Machines that convert daily organic waste into nutrient rich compost quickly, hygienically, and efficiently. Designed for Indian conditions and compliance standards, our systems enable institutions to manage waste at source while reducing environmental impact.

From residential societies to municipalities and large commercial facilities, our OWC solutions deliver fast processing (24–72 hours) with odor free operation and minimal manual intervention.

WHY CHOOSE GO GREEN PLUS OWC MACHINES

Smart. Efficient. Compliant.

Rapid Composting
Converts organic waste into compost within 24–72 hours.

Regulation Ready
Compliant with SWM Rules 2026 & CPCB guidelines.

Energy Efficient
Low power consumption with optimized operating cost.

Odor-Free Operation
Fully enclosed system ensures hygienic and smell-free processing.

Waste Reduction
Reduces waste volume by up to **80–90%.**

Easy to Operate
User-friendly automated control system.

WHY IT'S BECOMING ESSENTIAL

Compliance is No Longer Optional
With stricter enforcement of Solid Waste Management Rules (India), bulk waste generators (100 kg/day and above) are now mandated to process waste at source.

High Operational Costs
Increasing expenses for waste transportation and landfill disposal.

Risks of Non-Compliance

Sustainability Impact
Negative effect on ESG goals, CSR commitments, and brand reputation.

WHERE IT FITS BEST

Designed for Every Waste Generator
Our OWC Machines are built to serve a wide range of applications with efficiency, compliance, and reliability.

Hotels & Restaurants
Maintain hygiene while handling high-volume food waste.

Hospitals & Educational Institutions
Ensure safe, compliant, and eco-friendly waste disposal.

Housing Societies & Residential Complexes
Manage daily kitchen waste efficiently at source.

Corporate Offices & IT Parks
Strengthen ESG performance and sustainability initiatives.

Municipal Bodies & ULBs
Enable decentralized and scalable waste management systems.

HOW IT WORKS

From Waste to Value with **Go Green Plus**

Organic Waste

Food Waste
Kitchen scraps
Garden waste.

MIXING

Weste is automatically mixed inside the chamber.

DECOMPOSITION

Aerobic microbes break down waste in 24-72 hours.

CONVERSION

Waste transforms into nutrient- rich compost.

OUTPUT

Organic Compost (Fertilizer)
Rich, reusable and eco-friendly.

Key Benefits

Environmental Impact

- Prevents organic waste from reaching landfills
- Reduces methane emissions and carbon footprint
- Produces natural compost that enriches soil health

Institutional Advantage

- Ensures regulatory compliance
- Enhances brand image as an eco-conscious organization
- Supports CSR and sustainability reporting
- Reduces long-term operational costs

What Sets Go Green Plus Apart

- End-to-end solution: design, installation, and after-sales support
- Engineered for durability and Indian operating conditions
- Scalable systems for small to large waste volumes
- Focus on automation, safety, and long lifecycle performance

Start Your Zero Waste Journey!!!

Transform your organic waste into a valuable resource with Go Green Plus OWC Machines.
Build a cleaner facility, reduce costs, and contribute to a sustainable future.

Biogas Plant

At Go Green Plus, we empower cities, industries, and communities to convert organic waste into clean, renewable energy through advanced smart biogas systems. Our solutions are engineered for performance, compliance, and long term sustainability, helping organizations move beyond waste disposal to resource recovery.
With scalable, modular, and fully automated biogas plants, we enable decentralized waste management while ensuring alignment with SWM Rules 2026 and CPCB guidelines. India generates over 65 million tons of waste annually, making scientific waste processing not just necessary, but critical. Our systems reduce landfill dependency while generating biogas and organic fertilizer, delivering real economic and environmental value.

What You Gain with Go Green Plus

- Assured compliance with SWM Rules 2026 & CPCB norms.
- Significant reduction in waste handling and fuel costs.
- Generation of clean biogas for energy Independence.
- High-quality organic fertilizer for sustainable agriculture.
- ESG value creation with measurable carbon reduction.
- Support in subsidies, carbon credits, and regulatory approvals.

Who We Serve

Urban Local Bodies & Municipalities

Decentralized waste processing systems that reduce landfill burden and support Swachh Bharat initiatives.

Industries & Manufacturing Units

Efficient treatment of organic waste for food processing, dairy, and agro-industries, cutting disposal costs and energy expenses.

Corporates & Institutions

End to end waste to energy systems for IT parks, hotels, campuses, and commercial establishments to meet ESG and sustainability targets.

Residential Communities

Compact and portable biogas solutions for housing societies to convert daily wet waste into usable gas and compost.

Our Smart Waste-to-Energy Process

Collection & Segregation – Efficient handling of organic waste at source.

Pre-processing – Removal of non-biodegradable materials as per standards.

Anaerobic Digestion – Controlled biological process for maximum gas yield.

Energy Output – Biogas for cooking, heating, or power generation.

By product Utilization – Nutrient-rich bio-slurry and compost.

Why Choose Go Green Plus

Advanced clean-tech solutions tailored for Indian conditions.

Strong focus on compliance, automation, and efficiency.

End to end execution: Design → Installation → Operations → AMC.

Expertise in integrating waste management with renewable energy.

Commitment to sustainable, scalable, and future-ready infrastructure.

Our Biogas Solutions Portfolio

Commercial Biogas Plants – Ideal for hotels, canteens, and institutions.

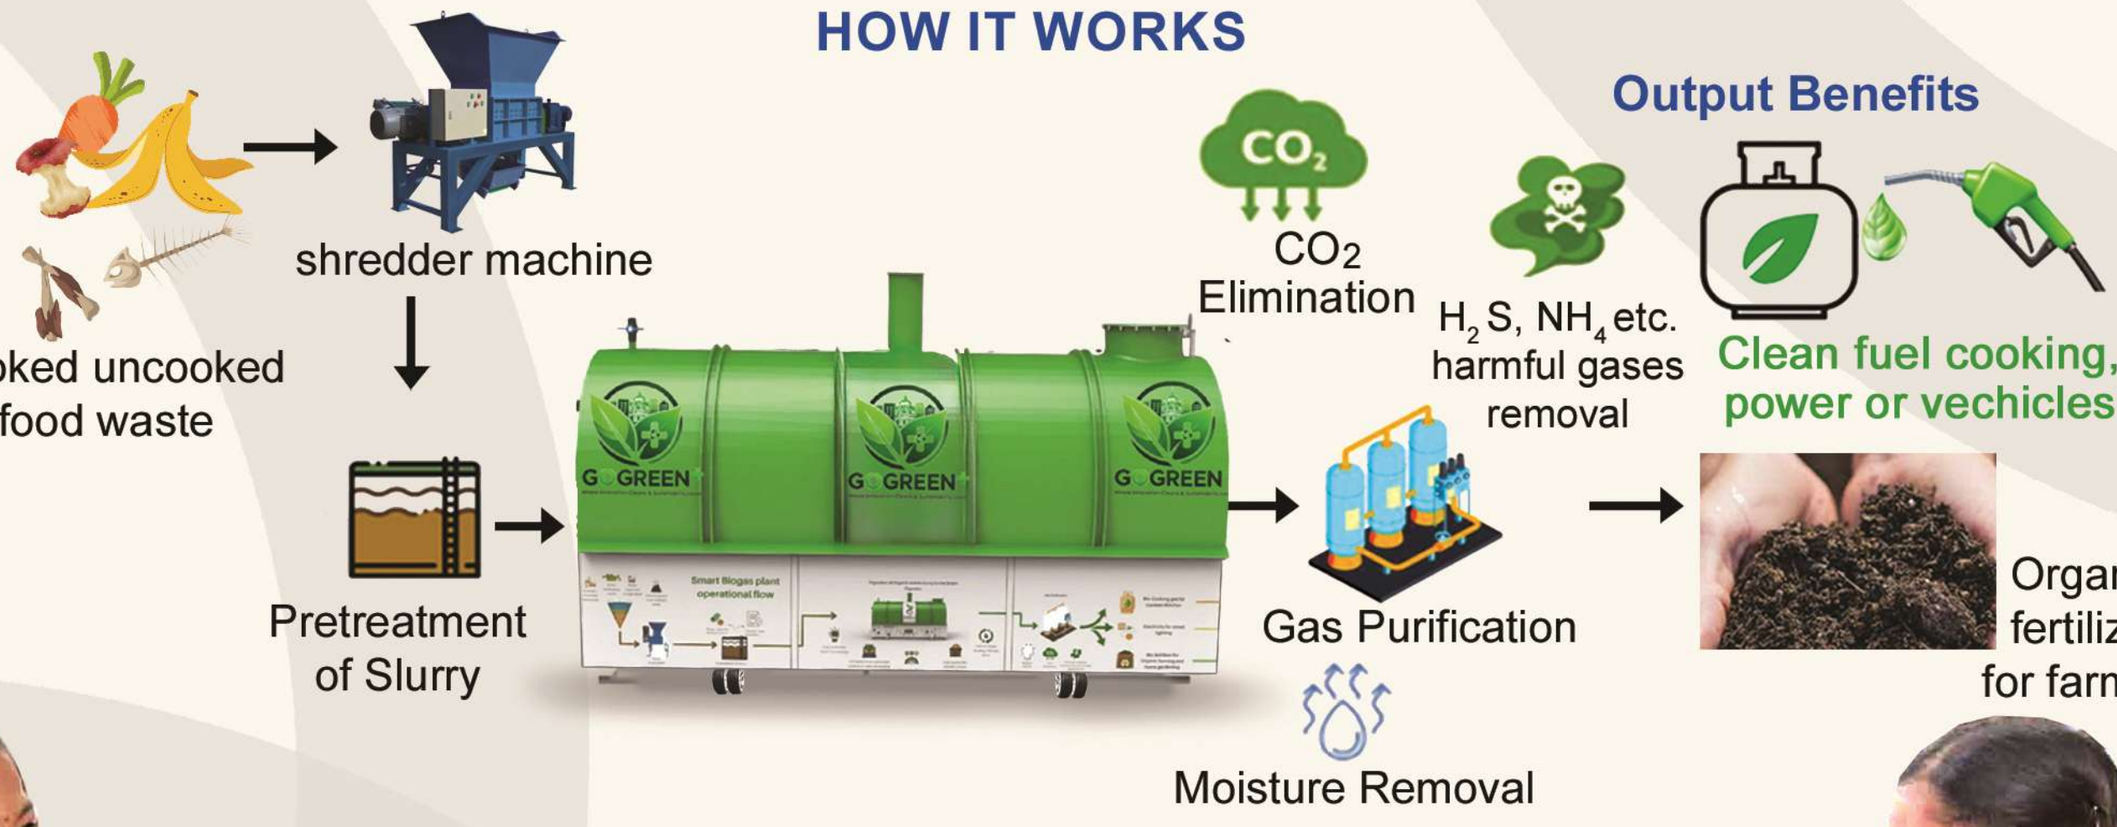

Automatic Biogas Plants – Fully automated systems for high-capacity waste.

Industrial Biogas Plants – Engineered for factories and agro-processing units.

Community & Municipal Plants – Large-scale decentralized systems.

Portable Biogas Units – Flexible, compact solutions for small-scale use.

HOW IT WORKS

You don’t just install a biogas plant - you build a self - sustaining ecosystem that transforms waste into value, reduces operational costs, and strengthens your environmental responsibility.

Transform Organic Waste into Clean Fuel, Cost Savings & ESG Impact

Bio-CNG Plant

GO Green Plus is a forward-thinking clean energy company delivering high performance BioCNG plants across India. We help industries, municipalities, and investors convert organic waste into renewable fuel supporting national missions like SATAT, GOBAR-DHAN, and India's Net Zero goals.

What is BioCNG?

BioCNG is purified biogas (>90% methane) made through anaerobic digestion of waste like agri residue, dung, and food waste.
It replaces CNG, LPG, and other fossil fuels.

Why It Matters

- Converts waste into energy.
- Reduces fuel costs.
- Backed by government initiatives (SATAT, GOBAR-DHAN).
- Supports Net Zero targets.

What We Offer

- Plants from 5–500 TPD.
- High efficiency gas purification.
- Automated, low maintenance systems.
- End to end execution: design → installation → AMC.
- Patented VPAS technology → high yield, low downtime.

Bio-CNG is the need of the hour

to solve the waste crisis of India
to make India leading producer of Green energy

Who Should Invest / Use BioCNG Plants?

- Industrial Owners & Large Enterprises: Sugar factories, agro-processing, food units → reduce energy costs, manage waste, and create revenue streams.
- HNIs & Investors: High-ROI BioCNG investment opportunities backed by government incentives.
- Government & Municipalities: Establish SATAT initiative CBG plants for sustainable waste management.
- Corporate / Transport Sector: Fleet operators, campuses, commercial kitchens → sustainable fuel & ESG benefits.

How BioCNG Plants Work

- Feedstock Collection: Agri residue, cattle dung, food & municipal waste.
- Anaerobic Digestion: Microbes decompose waste → raw biogas.
- Purification: Removal of CO_2 , H_2S, and moisture → high-purity CBG.
- Compression & Storage: Gas stored for industrial, commercial, or vehicle use.

Applications

- Transport fuel.
- Industrial heating.
- Power generation.
- Cooking.
- Waste management.

Benefits

- Lower operating costs.
- New revenue streams.
- Sustainable waste handling.
- Strong ESG impact.

What to feed?

- Agricultural Waste.
- Food Waste.
- Animal Manure.
- Organic Crops.
- Green Waste.
- Aquatic Plan.
- Organic Residues.
- Industrial Waste.
- Oil and Fat Residues.

Smart Waste management Application

Multi user digital platform for efficient transparent & accountable waste management

Multi User Ecosystem

Citizen Interface

Service Booking, Complaints, Grievance Redressal

Organization Interface

Task Creation
Organisation selects service area via map.

Employee Interface

Admin Dashboard

Organization Interface

1. Task defined with scope, workforce requirement & timeline.
2. **Smart Assignment**
   System assigns required number of employees based on area and workload.

Monitoring & Communication

- Live updates available on dashboard
- In app chat and voice communication across all the stakeholders

Field Execution

- Employees reach the site and initiate tasks using geo tagged photo/video.
- Real time location & activity tracking.

Field Problem

- Report Road Damage and Pothole Identification Heritage and Tourism Site Issues

Task Completion

Task Completion

Work closure with geo tagged proof and time validation

Transparency & Accountability Mechanism

- Geo tagged proof of every task (start to completion)
- Time bound task execution tracking
- Real time monitoring of workforce and ev fleets
- Digital audit trail for every activity

Operational Workflow

- Map based task allocation system
- Geo tagged photo/video work verification
- GPS tracking of EV fleet & workforce
- In app chat & voice communication
- Time bound task management system
- Real time centralized dashboard

Citizen and Field Intelligence Network

- Citizen can book waste collection services.
- Report garbage dumping with rapid response mechanism.
- Field employees can report : Road Damage and Pothole IdentificationHeritage and Tourism Site Issues.
- Transforming workforce into a city wide monitoring network.

AI powered analytics

- Worker wise performance tracking.
- Daily to yearly operational reports.
- Waste collected, processed and recycled data.
- Bio-CNG, Bio-gas energy generation insights.
- EV fleet movement and carbon generation insights.

Governance Benifit

- Ensure 100% improvement in collection efficiency.
- Enable data driven decision making.
- Reduce manual monitoring and operational inefficiencies.

Measurable Impact

- Upto 90% improvement in collection efficiency.
- 100% traceability and waste life cycle.

This strategy enables targeted intervention instead of random cleaning efforts, leading to more impactful waste management

Smart Cleaning Schedule & Routes

AI driven planning for efficient and effective cleaning schedule and routes.

AI Route Optimization · Real time traffic integration · Waste hotspot identification · Optimized cleaning routes · Reduce time & cost · Cleaner Communities · Data driven decisions

Vehicle Based Littering Detection

This system actively monitors for waste thrown from both moving and parked vehicle

When an incident is detected the system captures:

- TRO1 XXXX — Vehicle Number
- Location and Time (precise details)

Incident Report Generated

VEHICLE NO.: TRO1 XXXX

LOCATION: 18.5204° N, 73.8567° E

TIME & DATE: 21 May 2025, 10:24 AM

Evidence

Submitted to Municipal Authorities

These comprehensive reports are submitted to the designated municipal authorities for further action and facilitating enforcement

Enforcement Support System

Go Green Plus will play a vital role in supporting enforcement by ensuring accurate reporting, collaboration and public awareness.

Compiling Verified Violation Reports

Ensures all reports are accurate and substantiated with evidence.

Sharing with Authorised Departments

Distribute reports to relevant municipal agencies for action.

Supporting Awareness Regarding Applicable Rules

Educate the public and authorities about waste management regulations.

Legal Compliance & Effective Enforcement

Maintains legal compliance and enables effective enforcement of anti-littering and anti-dumping laws.

Behavioural Impact

The visible presence of the monitoring system is expected to create a significant deterrence effect.

Citizens become more cautious in public behaviour:

Knowing they are being observed encourages responsible actions.

Awareness

Educating the public about the importance of cleanliness.

Social Pressure

Encouraging community responsibility and discouraging undesirable behavior.

Surveillance

Providing a mechanism for monitoring and enforcement.

OUR TEAM

A dedicated team of experts and innovators driving sustainable solutions for a cleaner, greener, and energy-positive future.

GOGREEN+
Where Innovation Cleans & Sustainability Lead

LEADERSHIP

Dr. Bilash Chandra Roy
Founder & Director
(Clean-Tech & Sustainability Initiatives)

Mr. Samik Das
Co-Founder, Managing Director &
Chief Executive Officer (CEO)

ADVISORY & INDUSTRIAL COUNCIL

Prof. (Dr.) Sabyasachi Dasgupta
Expert in biodiversity, ecosystem services & environmental policy with 20+ years of academic and research leadership.

Prof. (Dr.) Swarnali Nath Choudhury
Specialist in medicinal chemistry and natural products research with strong academia-industry collaboration.

Er. Shyamal Majumder
Civil engineering expert with vast experience in infrastructure planning, design & execution.

Dr. Manik Chakraborty
Oversees financial planning, investment , budgeting, and fiscal discipline to drive sustainable growth .

Dr. Swapan Das
Waste management expert specializing in EV technology.

Mr. Abhijit Saha
Drives business growth, partnerships, and market expansion across regions.

CORE MANAGEMENT TEAM

Mr. Debaprasad Paul
Leads digital transformation with smart systems, IoT integration & platform development.

Mr. Mrigangka Datta
Develops scalable software solutions powering digital monitoring & smart operations.

Advocate Kushal Deb
Ensures legal compliance, contracts, and regulatory approvals across all operations.

Ms. Anamika Ghosh
EHS professional ensuring sustainability, risk management & compliance excellence.

Dr. Mrinal Kanti Deb
Focused on rural development, livelihood programs and social impact initiatives.

One Team – United by purpose
One Mission – Sustainable solutions
One Future – Greener tomorrow
One Goal – A cleaner, energy-positive world

GROWTH VISION

We aim to build a replicable, decentralized waste management ecosystem that can be implemented across diverse regions.

OUR MISSION

To transform Tripura into a clean-tech model state by converting waste into valuable resources and clean energy. We address the growing challenges of waste mismanagement, landfill overflow, and environmental degradation through innovative, scalable, and locally adaptable solutions.

A SMARTET APPROACH TO A CLEANER, GREENER, RESPONSIBLE CITY

- Data-Driven Decisions
- Efficient Operations
- Sustainable Environment
- Community Participation
- Measurable Impact

OUR MESSAGE

"From Tripura to India building a cleaner, greener, and energy-positive future."
